Profile

AI Business Analyst and Delivery-focused Data Scientist with strong experience in AI-powered process automation, data governance, explainable machine learning, and enterprise analytics delivery. Proven ability to translate business problems into AI solutions, lead requirements definition, support testing and implementation, and work with cross-functional engineering and business stakeholders. Experienced in ServiceNow automation, metadata governance, model monitoring, and AI explainability with strong communication and documentation skills. Currently completing an MSc in Data Science at the University of Glasgow.

Education

UNIVERSITY OF GLASGOW
Glasgow, Scotland
MSc Data Science

Batch of 2026

SDM INSTITUTE OF TECHNOLOGY
Ujire, DK
Bachelor's Degree, Artificial Intelligence and Data Science.

Batch of 2025

Experience

EDUDIAGNO
Karnataka

Bangalore,

Data Analyst

January, 2025 – Ongoing

- Lead data quality automation and governance pipelines using Python and SQL to improve reliability of ML-ready datasets across microservices.
- Designed and implemented an internal metadata cataloguing and lineage system, improving transparency and explainability of enterprise data flows by over 30%.
- Built schema standardisation frameworks for structured and semi-structured sources, enabling consistent multi-source ingestion for analytical and AI use cases.
- Partner closely with product managers, engineers, and business users to translate operational requirements into actionable analytical solutions.
- Support testing, validation, and continuous improvement of data pipelines using structured test scenarios and controlled validation datasets.
- Contribute to continuous service improvement (CSI) initiatives by proactively identifying bottlenecks in data workflows and proposing automation-led optimisations.

PUBLICIS SAPIENT

Data & Automation Consulting Intern (Merged Role)

Boston, USA (Remote) & Bangalore, India

November 2023 – December 2024

- Supported enterprise AI-driven automation initiatives within ServiceNow workflows to improve operational efficiency and reduce manual processing effort.
- Conducted process analysis and data mapping across ESG, sustainability, and operational datasets involving structured and unstructured sources.
- Built a metadata tagging and governance module to enhance dataset traceability and explainability for downstream analytics and ML applications.
- Worked with engineering leads, analysts, and business stakeholders to define functional and non-functional requirements for data and AI solutions.

- Produced business-facing documentation and training materials to support adoption of AI-enabled process changes across non-technical teams.
- Contributed to testing cycles by validating data pipelines, transformation logic, and automation outcomes against business expectations.
- Demonstrated consulting-style delivery discipline, including stakeholder communication, sprint-based execution, and structured progress reporting.

GRAPHGEO

Bangalore, Karnataka

Data Analyst Intern

June, 2023 – August, 2023

- Processed and analysed large-scale geospatial datasets using Python and SQL, improving analytical query performance by approximately 15%.
- Enhanced metadata standards and dataset documentation, improving clarity, reuse, and explainability of analytical inputs.
- Worked with analysts and engineering teams to ensure consistent data preparation workflows and high-quality ingestion into production systems.

Projects

Financial Risk Signal Extraction from News

- Built a full NLP pipeline using FinBERT and sentence transformers to extract sentiment, volatility, and forward-risk indicators from financial news.
- Engineered entity-level polarity, topic embeddings, and time-weighted risk features for downstream prediction models.
- Deployed a LightGBM predictive model with explainability delivered via SHAP and LIME text attributions for non-technical stakeholders.
- Addressed class imbalance (~8:1) using SMOTE and stratified cross-validation, achieving stable out-of-sample performance.

Credit-Default Pattern Modelling on Synthetic Portfolio Data

- Trained classification models (LogReg, RandomForest, XGBoost) on clean + noisy synthetic loan datasets to detect default behaviour.
- Implemented feature importance ranking, partial dependency plots, SHAP, and monotonic constraints to ensure interpretability.
- Designed a lightweight model monitoring dashboard (Streamlit) showing drift, stability index, and prediction distributions.

Skills & Interests

AI & Data Science:

Machine Learning, NLP, LLMs, Prompt Engineering, Model Explainability (SHAP, LIME), Drift Monitoring, Feature Engineering, Data Quality, Data Governance, Metadata Management, Data Cataloguing

Programming & Systems:

Python, Java, C, C++, SQL, JavaScript, React, Node.js, Django, REST APIs, Git, CI/CD

Delivery & Analysis:

Business Requirements Gathering, Process Analysis, Test Scenario Design, Data Mapping, Documentation, Stakeholder Communication, Agile Delivery, DevOps Practices, Continuous Service Improvement (CSI)
